

Randwick Campus Redevelopment - Salvageable Items

What are salvageable items?

Salvageable items are found within a property that have been identified as having salvage value. Salvageable items include objects like lead light windows, doors, fixtures and fittings.

Once identified, these items are carefully removed and made available for purchase through a specialist salvage contractor. Along with helping to preserve the historical significance of the era in which the properties were built, salvation also acts as a sustainability measure through the recycling and repurposing of conserved items.

What happens to salvaged items from the Randwick Campus Redevelopment?

Items with salvage value have been identified through internal and external inspections of acquired properties in Magill Street, Botany Street and Eurimbla Avenue.

These items are documented within a catalogue and taken offsite to a storage facility where items are made available for purchase.

Have previous owners been given an opportunity to keep salvageable items?

Yes. During the negotiation process, owners have had the opportunity to identify certain items they wish to be excluded from the sale. Previous owners will also have the opportunity to bid on items through the salvageable process.

How do I express interest in purchasing salvaged items?

This process is managed by the company DECC, one of the project's sub-contractors. You can contact Ivan Lim at DECC either by phone or email:

Phone: 0419 248 814

Email: ivan@decc.com.au

When will items be available to view?

Items are being removed and available now and new items will become available over the coming weeks. To view the catalogue please contact DECC and note that it is updated regularly as items are progressively salvaged.
